# The Cloud Resume Challenge - GCP

## 1. Certification

Your resume needs to have the [Google Cloud Digital Leader](#) certification on it. This is an introductory certification that orients you on Google Cloud – if you have a more advanced Google Cloud cert, that's fine but not expected. You can sit this exam online for \$100 USD. [Google offers exam prep resources](#).

## 2. HTML

Your resume needs to be written in [HTML](#). Not a Word doc, not a PDF. [Here is an example of what I mean](#).

## 3. CSS

Your resume needs to be styled with [CSS](#). No worries if you're not a designer – neither am I. It doesn't have to be fancy. But we need to see something other than raw HTML when we open the webpage.

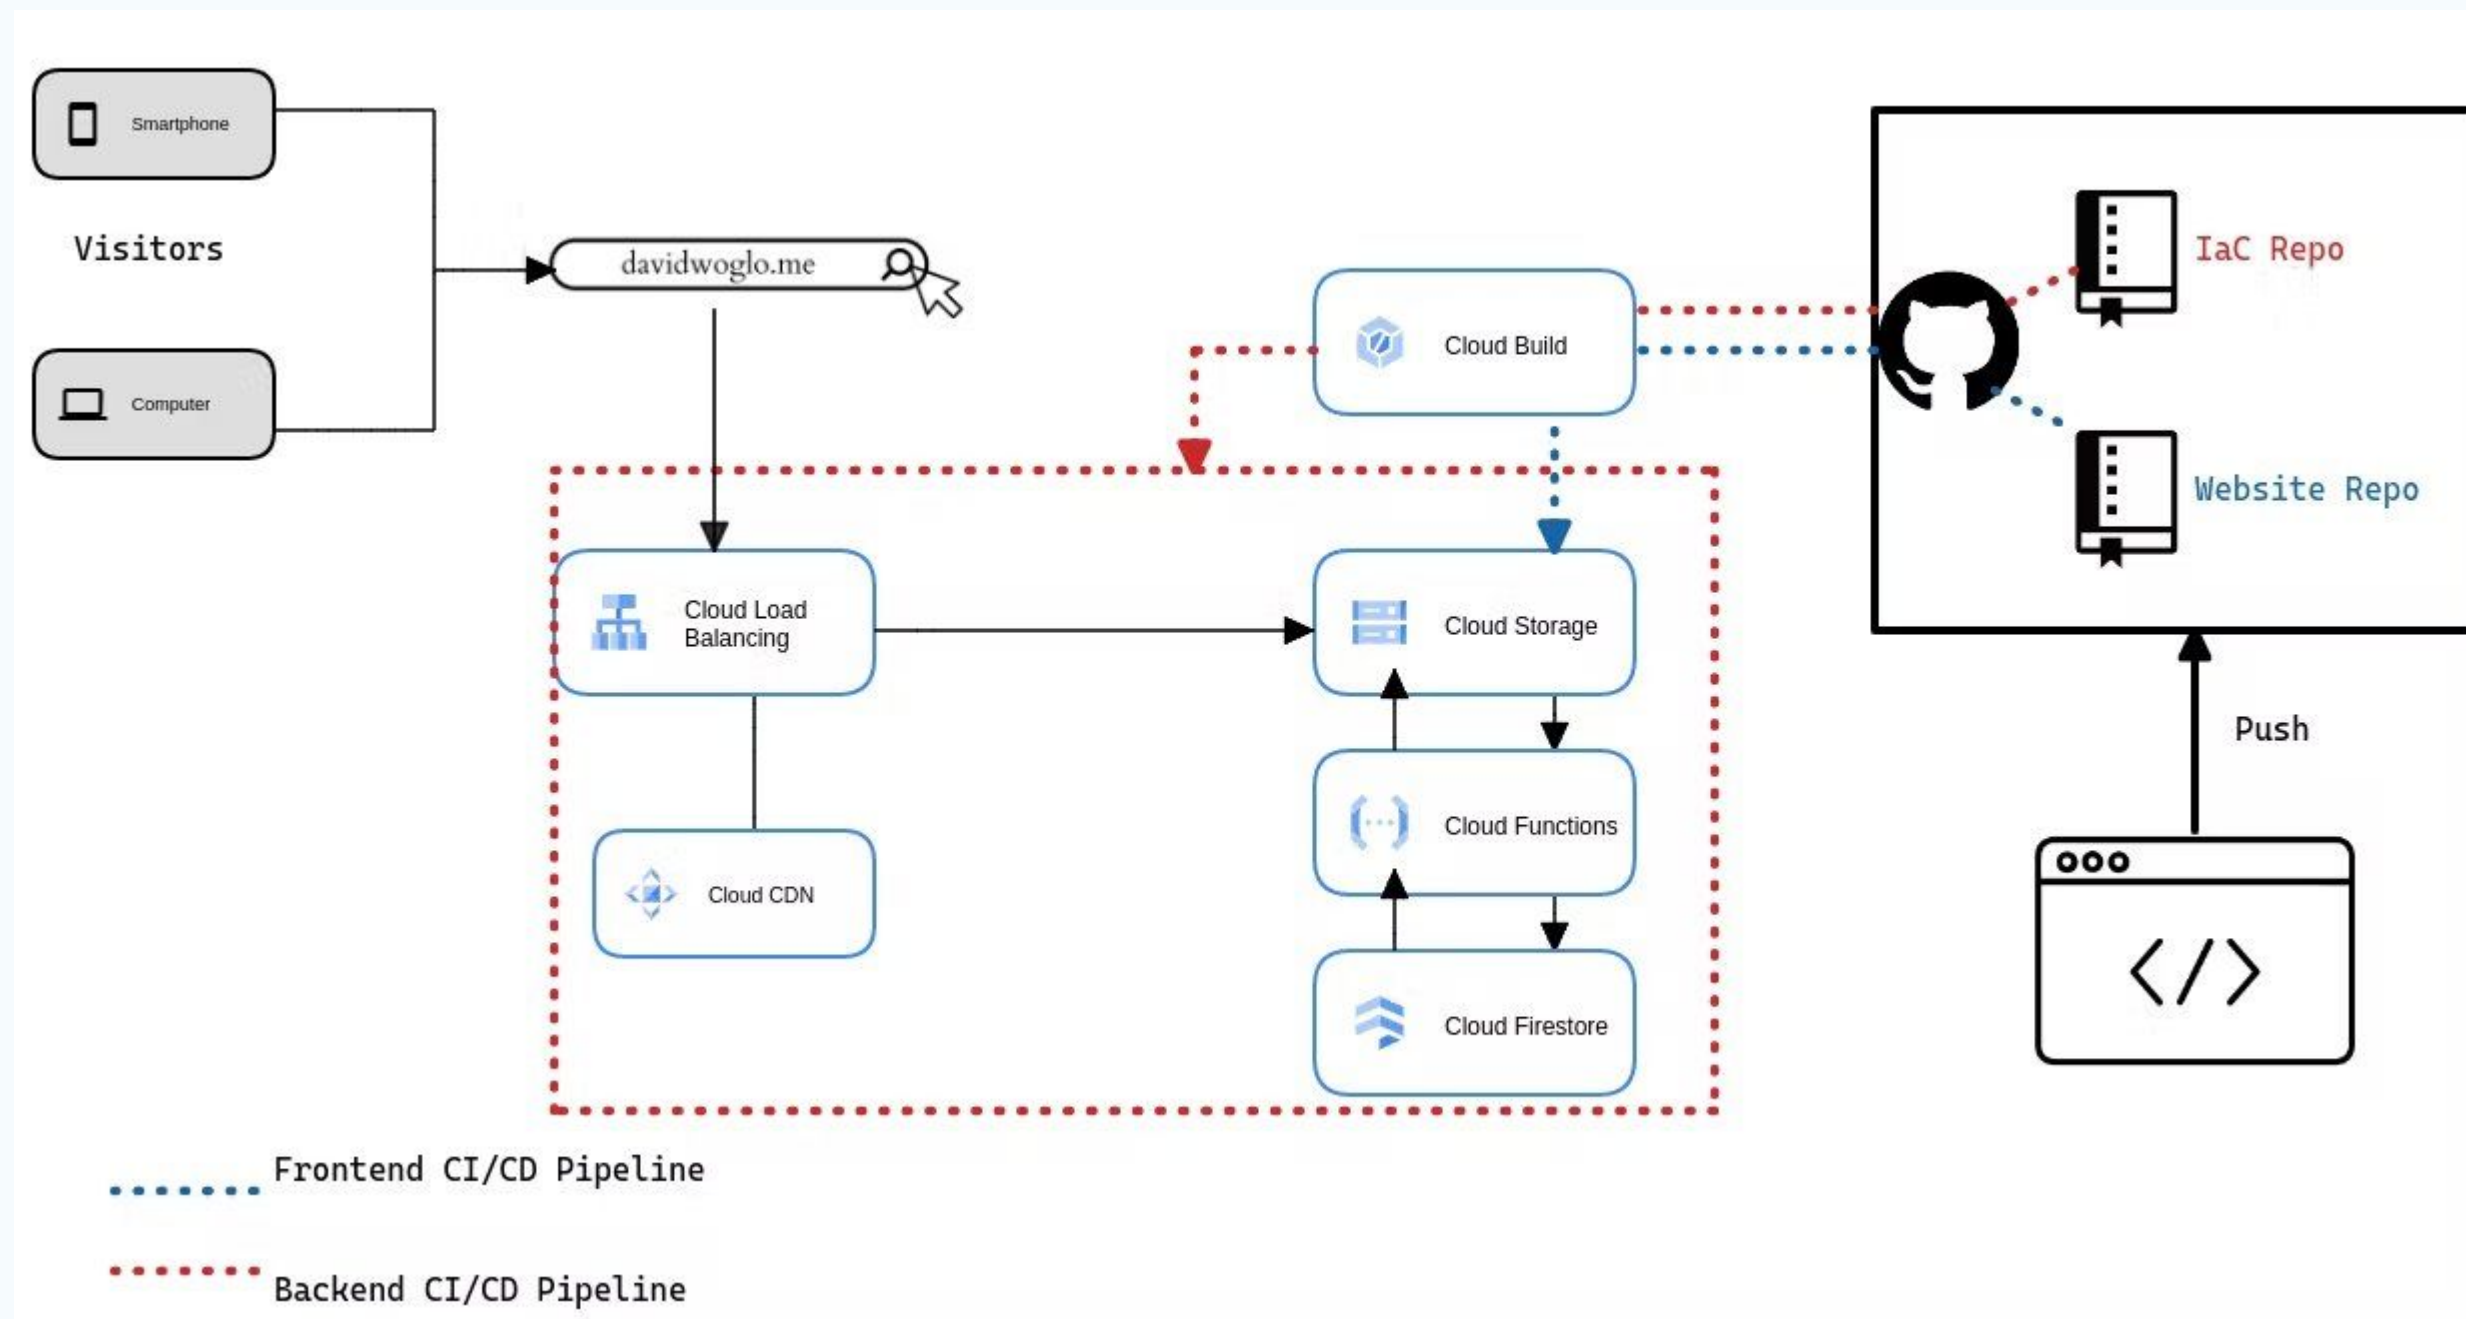

## 4. Static Website

Your HTML resume should be deployed online as a static website using [Google Cloud Storage](#). Services like Netlify and GitHub Pages are great and I would normally recommend them for personal static site deployments, but they make things a little too abstract for our purposes here. Use GCS.
